

For Immediate Release

National Datacomputer, Inc. Enhances RouteRider LE™ with Integration of UPS Logistics Technologies Roadnet Transportation Suite to Benefit Direct Store Delivery Companies

BILLERICA, Mass. August 12, 2008-- National Datacomputer, Inc. (OTC Bulletin Board: NDCP - News) a leading provider of mobile computing solutions, announced today that the company will integrate support between its RouteRider LE™ Version 8 Site Optimizer and UPS Logistics Technologies' Roadnet®, Territory Planner®, and FleetLoader.® Both companies will market the combined solution to the Food and Beverage Direct Store Delivery (DSD) industry.

"UPS Logistics is a trusted leader in this market. Their proven solutions are relied upon on a daily basis in both their own massive fleet operation and by numerous other corporations around the world", said William Berens, President of National Datacomputer. "We are delighted to offer the combined technologies of both companies to our customers who seek greater efficiency for loading, routing, delivery, and tracking functions in order to stay competitive in this exceedingly difficult business environment."

"Both UPS Logistics Technologies and NDI are committed to solutions that will allow their customers to achieve rapid ROI from dramatic cost reductions created by advanced DSD route scheduling, truck loading, and last mile delivery, ordering, and forecasting," said Leonard R. Kennedy, Chief Operating Officer of UPS Logistics Technologies.

RouteRider LE™ is a comprehensive Direct Store Delivery application that has been highly optimized to perform multi-location site servicing on a single screen while providing advanced intelligence to ERP systems for more accurate forecasting of production and financial data from resultant mobile orders and deliveries. Roadnet® and Territory Planner® are highly adept at efficiently organizing orders for RouteRider LE™ customers using optimized strategic and tactical delivery routing/sequencing methods. FleetLoader® organizes vehicle loading for RouteRider LE™ customers to best meet their order building and stop sequence requirements for the route each day. Combined, the three products save users significant personnel, vehicle, and operating expenses while achieving greater customer satisfaction with on time product delivery and accurate billing.

"We are glad these companies have formed this alliance", said Pat Pecoraro, IT Director for Kalil Bottling Co. "We have been using NDI's RouteRider product line for 11 years and also rely on UPS Roadnet and Fleet Loader on a daily basis to run our business efficiently. We can attest to the benefits of each and see the combined as a very valuable solution to any company with 50 or more daily DSD routes."

About UPS Logistics Technologies

As a subsidiary of transportation and supply chain management company UPS (NYSE:UPS), UPS Logistics Technologies delivers transportation and logistics solutions that directly impact a company's bottom line. For more than 25 years, UPS Logistics Technologies has been focused on developing products and solutions to improve the operational efficiency of distribution companies. This concentrated focus has produced industry-leading software solutions that enable highly efficient order-to-delivery processes. Solutions include street-level route optimization, territory planning, mobile delivery execution, real-time wireless dispatch and GPS tracking.

With more than 3,100 installations worldwide, UPS Logistics Technologies' products are used to manage more than 130,000 vehicles daily. Customer Service is available 24 x 7. For more information, email roadnet@ups.com.

About National Datacomputer

National Datacomputer, Inc. (NDI) was founded in 1986 as a pioneer and leading provider of mobile computer direct store delivery (DSD) solutions to the Food and Beverage industry. Today our flagship solution, built upon years of experience, RouteRider LE™, provides critical route accounting integration to corporate ERP systems from the company's field sales and service organization by providing data collection, processing, and real-time communication for all transactions.

Our technology is based on Microsoft standards and platforms. Our handheld client runs on Windows Mobile based handhelds providing point of sale data to our SQL Server based Web Portal running on Windows Server systems.

NDI markets, sells, and services a comprehensive DSD solution including all required hardware, software, implementation, education, maintenance and technical support services to our customers in North America and Europe.
